Abstract (Basic): SU 620390 A

Making "olives" (electrodes) for use as gastric sondes for determining pH in the stomach, etc. involves using antimony and a polymer. The technology of making and maintaining the olives is improved by using powdered polyethylene as the polymer, mixing it with powdered antimony in a weight ratio corresponding to 0.15-0.25.3. The mixture obtained is pressed at 200-250 degrees C and 450-1200 kgs/cm² for a period of 10-40 minutes.
